# LESSON OBJECTIVE

- ★ Examine the Build components and build text files DSC, DEC, & FDF

# EDK II BUILD TEXT FILES

EDK II tools use INI-style text-based files to describe components, platforms and firmware volumes.

# General Format for All Build Text Files

## INI

- The EDK II Build Text Files use meta-data files using the INI format style

## Section “[ ]”

- All Build text files consists of sections delineated by section tags enclosed within Square “[ ” “]” brackets

## Case

- Section tag entries are case-insensitive

## Mult-Sections

- Text of a given section can be used for multiple section names by separating the section names with a comma

## Section End

- Sections are terminated by the start of another section or the end of the file.

## Comments

- The hash-tag “#” indicates text following to EOL is a comment (exception is within a quoted string)

## Include

- The “!include” statements are permitted in .DSC and .FDF but NOT .DEC

## Conditional

- Condition Statements Supported in .DSC and .FDF but NOT .DEC
- !ifdef, !ifndef, !if, !elseif, !else and !endif

# Package Declaration File (DEC)
